## DETAILED ACTION

### *Election/Restrictions*

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 1-10 and 27-32, drawn to a process and apparatus for manufacturing filters, classified in class 493, subclass 45.
- II. Claims 11-22, drawn to an apparatus for manufacturing filters, classified in class 493, subclass 39.
- III. Claims 23-26, drawn to an apparatus for manufacturing filters, classified in class 493, subclass 44.
- IV. Claims 33-35, drawn to a process for manufacturing filters, classified in class 493, subclass 45.

The inventions are distinct, each from the other because of the following reasons:

Inventions IV and (I-III) are related as process and apparatus for its practice.

The inventions are distinct if it can be shown that either: (1) the process as claimed can be practiced by another materially different apparatus or by hand, or (2) the apparatus as claimed can be used to practice another and materially different process. (MPEP § 806.05(e)). In this case the process can be practiced by another materially different apparatus. This is evident due to the lack of structural elements required by the process as outlined in claim 33 ie. supplying material from a hopper is not provided for or required by the limitations present in independent form of groups I or II.

Furthermore, inventions I and IV are related as combination and subcombination. Inventions in this relationship are distinct if it can be shown that (1) the combination as claimed does not require the particulars of the subcombination as claimed for patentability, and (2) that the subcombination has utility by itself or in other combinations (MPEP § 806.05(c)). In the instant case, the combination as claimed does not require the particulars of the subcombination as claimed because it does not require supplying material to a horizontal pan therefore, the subcombination has separate utility.

Inventions I and II are related as subcombinations disclosed as usable together in a single combination. The subcombinations are distinct from each other if they are shown to be separately usable. In the instant case, invention I has separate utility such as forming individual filters from a continuous rod. See MPEP § 806.05(d).

Inventions II and III are unrelated. Inventions are unrelated if it can be shown that they are not disclosed as capable of use together and they have different modes of operation, different functions, or different effects (MPEP § 806.04, MPEP § 808.01). In the instant case the inventions are alternate embodiments having different functions.

Because these inventions are distinct for the reasons given above and the search required for any listed Group is not required for any other Group, restriction for examination purposes as indicated is proper.

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art because of their recognized divergent subject matter, restriction for examination purposes as indicated is proper.

A telephone call was made to Marc Richards on 12/22/04 to request an oral election to the above restriction requirement, but did not result in an election being made.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Christopher R Harmon whose telephone number is (571)272-4461. The examiner can normally be reached on Monday-Thursday from 8-6.
